## INTEGRATION

Our Power System Integrated Solutions offer turn-key integrated power distribution centers and electrical systems shipped to site with all equipment and controls installed and tested for plug-and-play applications—switchgear, motor control, variable speed drives, switchboards, panel boards, protective relay systems and controls housed in an outdoor, climate-controlled, industrial-grade building. Our team is there from the initial phases of reviewing the RFQ, data sheets and specifications, offering support on the application of the design through the start-up and commissioning.
